NODO AI

A private memory of your meetings.

Every answer points to the sentence it came from. If the evidence is not there, NODO says so.

Runs on your computer | or on Azure | EN · PL · IT · DA

NODO AI

From a conversation to a memory you can query

Record with everyone's knowledge, then let the system structure it. You stay in charge of what counts.

01
Record
A visible action and your signed declaration that everyone knows.

→

02
Transcribe
Speech to text with anonymous speakers you can name.

→

03
Extract
People, topics, decisions and actions, as proposals.

→

04
Connect
Search index and a knowledge graph with temporal links.

→

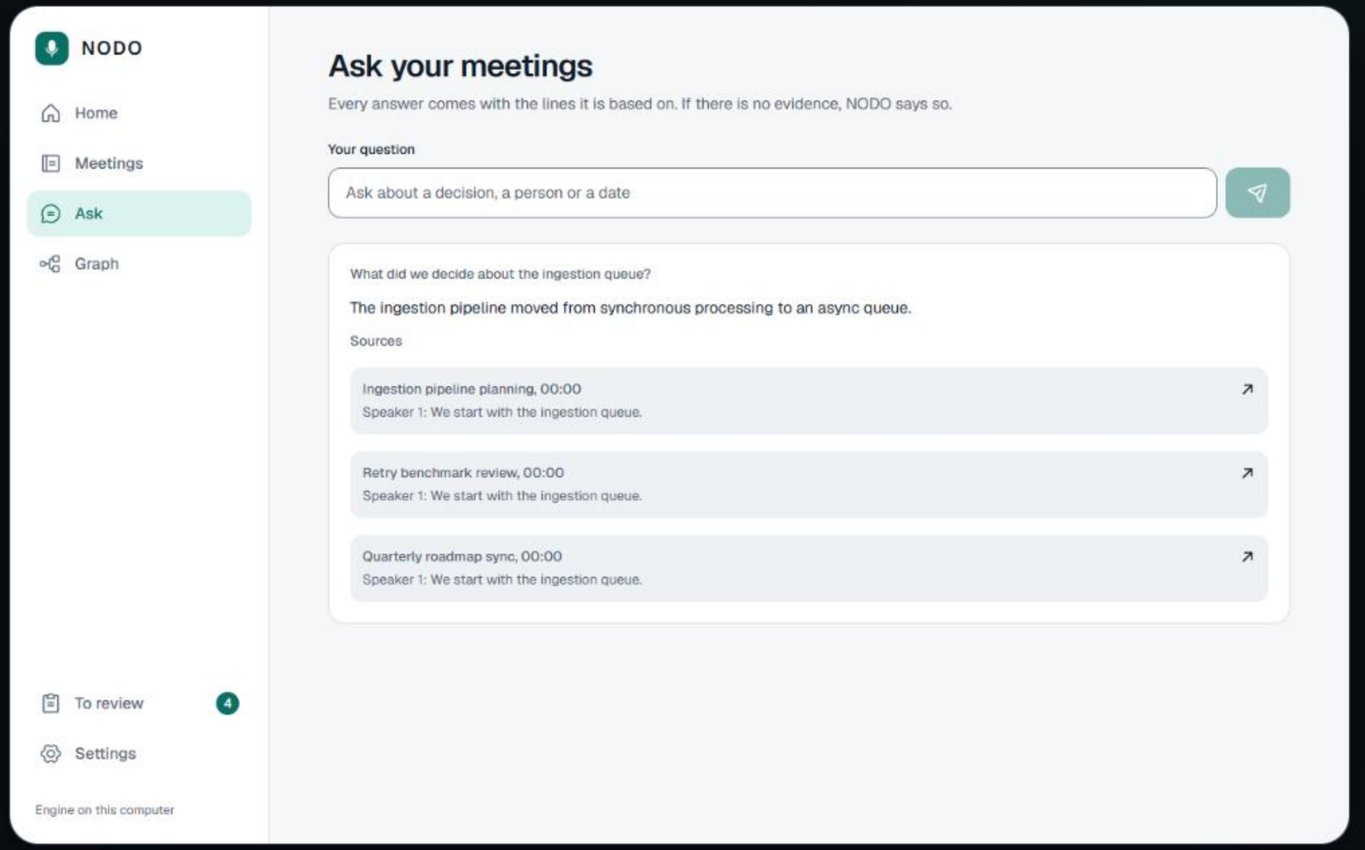

05
Ask
Answers with their quotes, or "not enough evidence".

NODO AI

Evidence or silence.

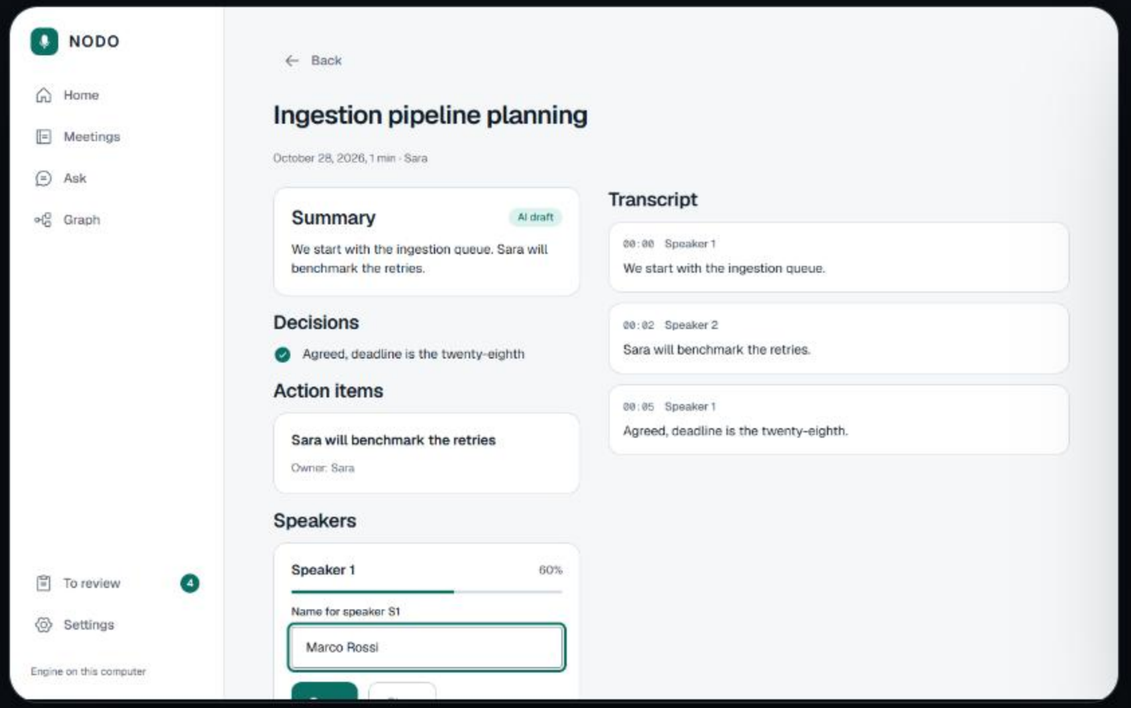

Ask in English, Polish, Italian or Danish. Each answer lists the quotes it is built on, and a click opens that sentence in the transcript.

An answer without a quote is refused by code, not by prompt.

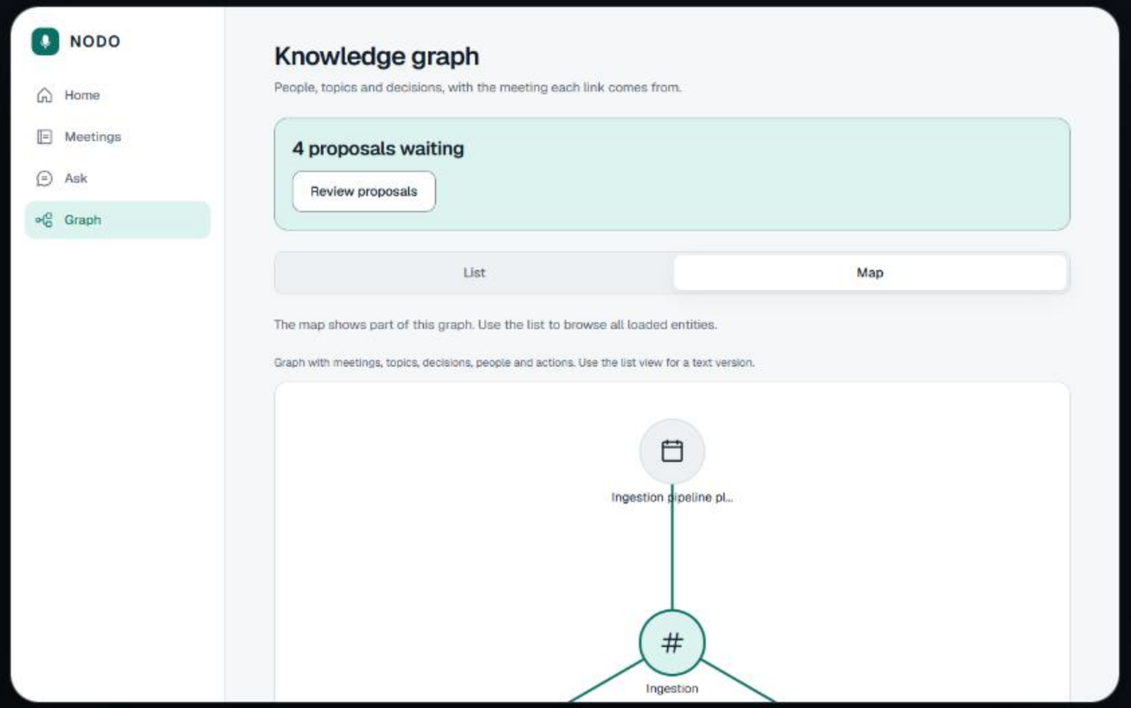

NODO AI

Transcript, decisions and a knowledge graph

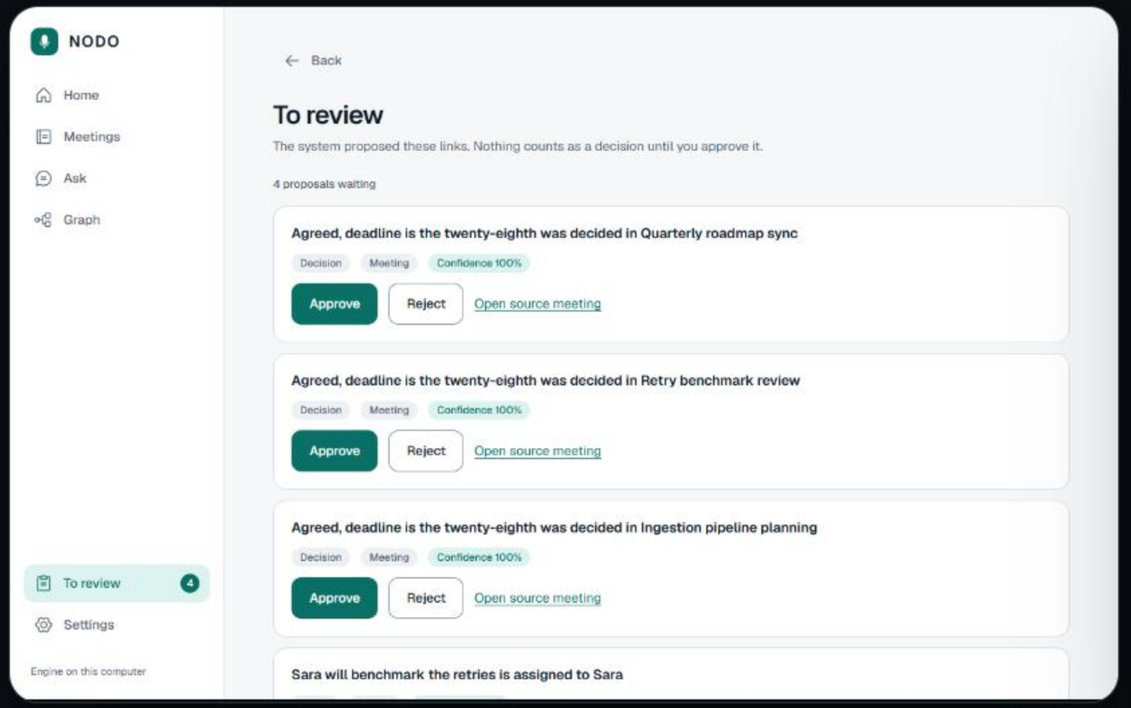

Summary, decisions, actions, speakers you can name, timestamps.

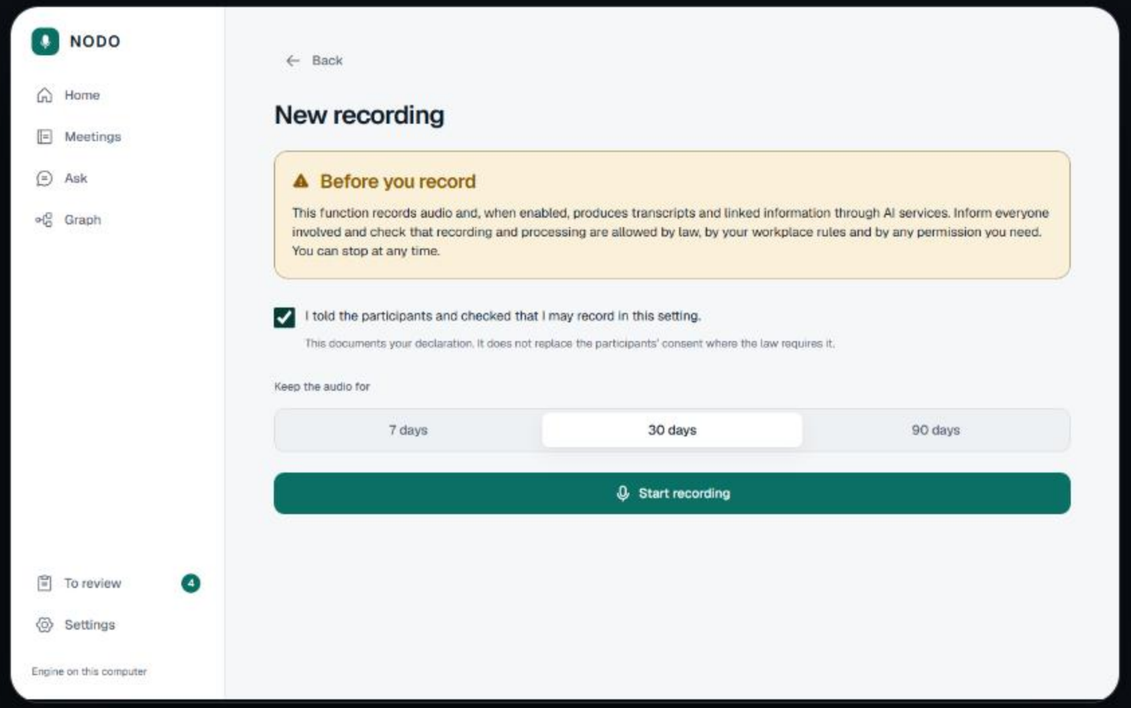

People, topics and decisions, each link tied to its meeting.

NODO AI

Humans decide. Nothing is hidden.

The system proposes; a decision is only a decision once you approve it. Every choice goes to an audit trail.

Recording needs a visible action, a notice and your attestation. Retention of 7, 30 or 90 days.

NODO AI

One interface, two engines

The same web app and the same API contract, on your computer or on Azure. A local archive can be copied to Azure later.

On this computer

- Whisper speech to text, speaker separation
- Qwen3 4B language model, multilingual embeddings
- SQLite and audio files, loopback only
- One hour of audio reviewable in about 15 minutes on a laptop GPU

On Azure

- Front Door with WAF, API Management, Container Apps
- PostgreSQL with pgvector, AI Search, Azure OpenAI, Azure Speech
- Microsoft Entra sign-in with PKCE, private networking
- Two regions, zone redundancy, defined as Terraform

NODO AI

Built to be checked

184
unit tests on the web app, API client and sign-in flow

21
browser tests: PKCE sign-in, recording, upload, export

22
infrastructure plan tests for both Azure tiers

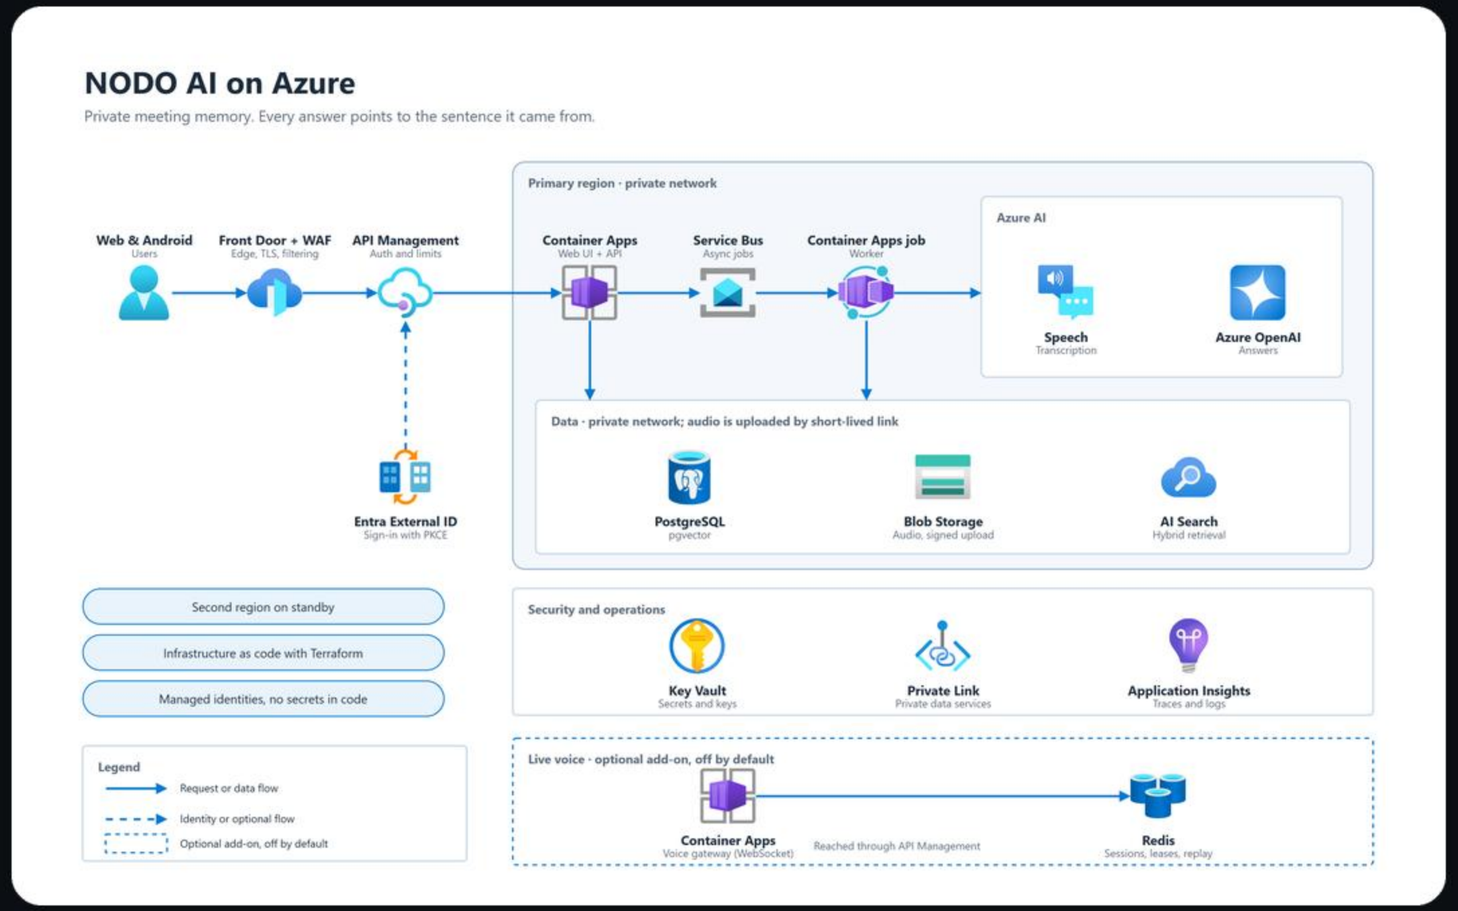

0
high or critical findings in the container image scan

Strict content policy, no inline script, accessibility checks in both themes, 28 architecture decision records.

Next.js · React · TypeScript · FastAPI · Python · PostgreSQL · pgvector · Terraform · Azure · Docker · Playwright · GraphRAG

NODO AI

Runs on Azure

Edge

Front Door + WAF,
API Management

Compute and data

Container Apps, Service Bus,
PostgreSQL + pgvector

Security

Key Vault, private endpoints,
managed identities

Resilience

A second region,
all defined in Terraform
